

command to said wireless communication means, entering data via said wireless communication means through said public communication channel, or transmitting data via said wireless communication means through said public communication channel, in which

said portable computer is provided with:

position coordinate data input means for entering the position coordinate data indicating the current position from a GPS user unit held in said housing or provided outside said housing; [and]

[transmission control means for transmitting the position coordinate data indicating the current position entered by said position coordinate data input means during the call made by said call means when communication is made via said wireless communication means]

emergency transmission instruction means for instructing an emergency call; and

signal superposition means for superposing the position coordinate data indicating the current position entered by said position coordinate data input means over the talk signal from said call means, according to an instruction from said emergency transmission instruction means.

2. ~~6~~ (AMENDED) The portable communicator according to claim ~~5~~ in which said [transmission control] signal superposition means [transmits] superposes the signal for indicating with voice the feature of the vicinity of the current position over the talk signal from said call means.

3. ~~7~~ (AMENDED) The portable communicator according to claim ~~5~~ in which said [transmission control] signal superposition means [transmits] superposes the signal for informing via facsimile the map of the vicinity of the current position [via facsimile] over the talk signal from said call means.

Da 4. ~~8~~ The portable communicator according to claim ~~5~~, in which said portable computer is provided with feature extraction means for retrieving the pre-stored map information based on said position coordinate data of said position coordinate data input means and extracting the feature of the vicinity from the map information corresponding to the position coordinate data, and

said signal superposition means superposes the signal for indicating with voice said feature extracted by said feature extraction means over the talk signal from said call means.

Da 11. ~~9~~ A portable communicator provided with:

a portable housing;

wireless communication means provided in said housing and wirelessly connected to a public communication channel for transmitting or receiving via said public communication channel; and

Cont  
D3  
a portable computer provided in said housing for directing control command to said wireless communication means, entering data via said wireless communication means through said public communication channel, or transmitting data via said wireless communication means to said public communication channel, in which

said portable computer is provided with:

place name memory means for storing a plurality of position data and storing the place name data corresponding to respective position data;

position coordinate data input means for entering position coordinate data from a GPS user unit held in said housing or provided outside said housing;

retrieval means for retrieving the place name data corresponding to position data from said memory means, in response to input of the current position from said position coordinate data input means; and

voice guide means for guiding with voice the place name data retrieved by said retrieval means.

### REMARKS

According to the Office Action dated February 16, 1999, the Examiner indicates that claims 5-10 and 26 should be amended. With respect to claims 9 and 10, however, no amendment was made thereto in the prior response filed on April 21, 1995. Accordingly, the Applicant excludes claims 9 and 10 from claim amendment at this time. With respect to claims 8 and 26, they were almost completely rewritten in the aforementioned prior response and, therefore, the Applicant rennumbers the rewritten claims 8 and 26 as claims 33 and 34, respectively, without adopting underlines or brackets.

In view of all of the amended claims, it is respectfully submitted that this application is now placed in a condition for allowance. Action to that end, in the form of an early Notice of Allowance, is courteously solicited by
